

**ACTIVE
SOYA**

advanced textile product

Active soya

Soybean protein fiber has a soft and smooth affinity to human's body skin and possesses many kinds of essential amino acids, which makes it to have good health protection effect. Activate your body with Active Soya walking along the beach, doing Yoga and in everyday life.

Natural & Biodegradable

It comes from soybeans, a plant massive in sourcing and rich in nutrition. It is the only renewable botanic protein fiber we can obtain nowadays. Massive in quantity, using it will not cause the predatory development on the resources but it is helpful to resources recovery and redevelopment. Its production is not poisonous to the environment, but eco-friendly.

Advanced textile product

Soy yarn is an advanced textile yarn. Its process requires new bioengineering technology.

Soy yarn becomes comfortable, healthy and the green product of the new century.

Appearance

Soybean fiber has joyful silky luster and an elegant and perfect drape. Fabrics of soybean yarn have a fine and clear texture, suitable for its manufacture. They display a natural and excellent sheen to the surface.

Ecological

Comfort & Hygiene

Knitting fabrics have a soft, smooth and light touch. The fabric has the same moisture water absorption as cotton and better moisture transmission, which makes it comfortable and sanitary.

Dyeing & washing properties

Active soya has a pure and shiny colour, possesses a perspiration and sunlight resistance and is ideal for colour retaining.

The fabric size is stable and holds its shape even in the wash. Garments knitted with soy yarn can easily and successfully be washed with no shrinkage under natural washing conditions. Moreover, the fabric of soybean fiber has anti-crease, easy-wash and fast-dry properties.

Healthy

Breathable

Uses

Soy yarn produces delicate, soft and smooth garments, which can be used in baby clothes, underwear, lingerie and nightwear, top-level shirts, sportswear, socks and household linen, such as towels, blankets and bed linen. In fact, it is the most suitable material for clothing items that comes into contact with the human's skin.

UV Resistant

Soy yarn provides protection from ultra-violet radiation, so protects skin from these damaging effects in outdoor use.
